Gagan Jassal

DevOps/Cloud Engineer

Oshawa, ON gdsjassal.er@live.com LinkedIn

Profile Summary

Seasoned Cloud and DevOps professional with a strong foundation in Azure infrastructure (5+ years), CI/CD automation, and secure cloud architecture and over a decade of experience in different industries. Passionate about delivering scalable, reliable, high availability solutions through modern IaC, containerization, and automation practices, while driving efficiency and operational excellence across the application and infrastructure life-cycle, supported by hands on experience working with ASP.NET (C#) based applications.

Work Experience

Accenture — September 2026 – Present

Client: Telecommunications — IaC Engineer — *Toronto*

- Provisioned secure AWS Databricks infrastructure as an IaC Engineer, developing modular Terraform code to streamline and automate environment deployment for enterprise data analytics and machine learning workloads.

April 2026 – October 2026

Client: Manufacturing — AI Platform Engineer — *Toronto*

- Deployed the Accenture AI Refinery platform onto the client's AWS EKS environment, establishing a scalable AI foundation and successfully delivering a high-performance Proof of Concept (PoC) within the targeted timeline for internal development teams.
- Architected a secure hybrid AI inference stack, deploying a self-hosted Qwen3 embedding model on GPU-dedicated EKS nodes with node affinity to optimize ingestion workflows, and integrating AWS Bedrock (Llama) via private AWS PrivateLink endpoints to maintain strict corporate data governance and zero data retention compliance.
- Customized Helm charts, configured Ingress with AWS ALB, managed TLS via AWS ACM, and set up Route 53 DNS to establish secure enterprise networking, laying a robust, production-grade infrastructure foundation for the client's emerging AI workloads.

April 2025 – March 2026

Client: Government of Canada — DevOps Consultant — *Toronto*

- Implemented enterprise-scale Azure infrastructure using Terraform by developing reusable modular IaC frameworks and multi-stage CI/CD pipelines in Azure DevOps, reducing configuration drift and improving deployment consistency across environments.
- Troubleshot complex networking challenges in zero-public-access environments, ensuring reliable connectivity across private endpoints, VNets, and hybrid integrations, while extending automation by integrating Terraform with ARM templates and PowerShell for complex deployment scenarios.
- Designed and maintained a customized Terraform module versioning and release pipeline integrated with JFrog Artifactory, enabling controlled distribution, version tracking, and reuse across teams.

IDC Canada — Jan 2018 – June 2023

DevOps/Cloud Engineer — *Toronto*

- Architected and implemented CI/CD pipelines for ASP.NET (C#) applications using Azure DevOps and Terraform, improving deployment efficiency by 80%, while automating Azure infrastructure provisioning with ARM templates and PowerShell, reducing manual errors by 70% across three environments.
- Managed containerized microservices via Docker & Kubernetes (AKS), ensuring 99% uptime for business continuity, and proficiently resolved Azure deployment issues across App Services, AKS, VMs, CI/CD, and security challenges within SLAs.
- Led skill-building sessions on version control, .NET development, and CI/CD for 5 developers, achieving a 30% increase in feature release speed within three months.

IDC Canada — May 2016 – Dec 2017

.NET Developer — *Toronto*

- Developed and maintained 12+ dynamic ASP.NET applications automating complex scoring models and generating dynamic PDF reports, consistently delivering 2–3 projects annually within 6–12 months while exceeding client expectations.
- Designed and optimized SQL Server solutions with efficient indexing strategies, transactional processing, and validation logic, ensuring high performance and data integrity across high-volume applications.
- Demonstrated strong cross-functional collaboration by assisting developers in resolving complex challenges, maintaining high code quality, and ensuring timely project delivery.

Help Desk Technology Corp **Sep 2012 – Apr 2016**
.NET Developer *Oakville*

- Led the enhancement of 13 out of 74 modules in an enterprise-grade service desk, a .NET (C#) software, improving performance and user experience, resulting in a 10% increase in efficiency.
- Collaborated with cross-functional teams, implementing new features and resolving 95% of critical issues within SLA.
- Built a responsive self-service portal with HTML5, Bootstrap, JavaScript & Telerik Kendo UI, increasing mobile accessibility by 25% and improving user engagement.

Red-D-Arc Inc. **May 2011 – Sep 2012**
Web Developer *Grimsby*

- Redesigned corporate ASP.NET (C#) website, boosting customer traffic and engagement by 25%.
- Maintained and optimized website performance for seamless user experience.

Projects

Infrastructure as Code (IaC)

- Manual Azure management led to inconsistencies, inefficiencies, and scaling challenges across environments.
- Task was to automate Azure resource provisioning to ensure consistency, repeatability, and scalability.
- Problem solved by creating Terraform modularized scripts and PowerShell automation to standardize deployments across three environments. Integrated Terraform into Azure DevOps CI/CD pipelines to streamline deployments and eliminate manual configuration, with version-controlled templates for better governance and disaster recovery.
- Resulted in cut of manual configuration time by 70%, improved consistency, enabled faster and, error-free provisioning.

Secure Cloud Networking

- The cloud environment required secure networking solutions to protect workloads while maintaining seamless connectivity between on-premises and cloud infrastructure.
- Task was to design and implement a secure and scalable cloud network architecture in Azure.
- Configured VNets, NSGs, Azure Firewall, and VPN Gateways to secure cloud resources and establish hybrid connectivity. Deployed Azure Load Balancers and Application Gateways to optimize traffic flow, improve reliability, and enhance access control.
- Resulted in enhanced security, reliability, and secure hybrid connectivity between on-premises and cloud environments.

Containerization and Orchestration

- Cloud-native apps needed a scalable, resilient microservices architecture, but manual scaling was inefficient.
- Task was to deploy and optimize a containerized solution using Kubernetes to ensure high availability and rapid scaling.
- Designed and deployed microservices with Docker, Kubernetes (AKS), and Helm for scaling and fault tolerance. Optimized cluster performance by configuring resource limits, auto-scaling, and service discovery. Automated container builds and deployments via Azure DevOps CI/CD pipelines and enforced RBAC for security.
- Resulted in faster scalability, 99.9% uptime, enhanced resilience, and secure access to Kubernetes workloads.

Cloud Monitoring Solution

- Cloud environment required proactive monitoring to detect issues early, minimize downtime, and optimize performance.
- Task was to implement a centralized monitoring and alerting solution for cloud resources and applications.
- Integrated Azure Monitor, Application Insights, and Log Analytics for proactive monitoring across VMs, App Services, and AKS. Developed dashboards and automated alerts for system performance insights. Ensured high uptime and quick issue resolution.
- Resulted in faster troubleshooting, less downtime, and improved reliability through enhanced performance visibility.

Technical Skills

Cloud Services: Azure & AWS
Infrastructure as Code (IaC): Terraform, ARM templates, Bicep
Automation & DevOps: Azure DevOps, GitHub Actions, Jenkins
Containerization: Docker, Kubernetes (Azure AKS & AWS EKS), Helm
Database & Storage: SQL Server
Programming & Scripting: C#, Python, PowerShell, Bash
Soft Skills: Excellent Communication

Education

Post Graduate Diploma: Wireless Networking **2008**
George Brown College *Toronto*

Bachelor of Technology: Computer Science & Engineering **2007**
Guru Nanak Dev University *India*

Certifications

- **Azure Solutions Architect Expert** | **DevOps Engineer Expert** | **Azure Administrator Associate** | **Certified Kubernetes Administrator** | **Certified Kubernetes Application Developer**
